                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 25, Application US/08980357

Sequence 25, Application US/08980357

Patent No. 601328

Patent No. 601328

Patent DUKTN-AMLEN, SILVIE

APPLICANT: DUKTN-AMLEN, SYLVIE

APPLICANT: OCHRVALIN PARRICE

TITLE OF INVENTION: EXPRESSION OF RESISTANCE TO GLYCOPEPTIDES, IN PARTICULAR

TITLE OF INVENTION: THESE POLYPEPTIDES AND USE FOR DIAGNOSIS

TITLE OF INVENTION: THESE POLYPEPTIDES AND USE FOR DIAGNOSIS

NUMBER OF SEQUENCES: 54

CORRESPONDENCE ADDRESS:

ADDRESSEE: OBLON, SPIVAK, MCCLELLAND, MAIER & NEUSTADT,

                             NOTE: This is a working draft' sequence. It currently consists of 26 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             23.3%; Score 141; DB 2; Length 195534; 100.0%; Pred. conjugated the proposes isociated niversed in bovine. Histatins are histidine rich and specific to the salivary secretions. They are believed to the function as part of the non-immune defence system, particularly in the carl cavity and have promise as therapeutic agents in humans with oral cavity and have promise as therapeutic agents in humans with oral carl cavity and have promise as therapeutic agents in humans with oral candidesis. Also disclosed are compositions comprising the histatin of polyapetide, and at least one component consisting of physiological or pharmaceutical carriers or immunostimulants. The histatin polynucleotide, polyapetide, or the cosmetic composition comprising the polyapetide, is useful for treating (e.g. gene therapy) a discrete in a mammal, particularly microbial or fungal infections. The histatin polynucleotide is also useful in genome mapping, physical captured or polymosical is also useful for treating fungal or bacterial infections of the oral cavity (e.g. dental caries, plaque or tartar), vagina, urethra, ear, skin, respiratory tract (e.g. cystic fibrosis caused by Pseudomonas aerudinosal, mucosa or eye, as well as for treating systemic infections such as systemic Candida infection. The polyapetide or polymosities is also useful for veterinary applications e.g. for treating mastitis. The sequence presented is a cDNA encoding a bovine the infection in the polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120

The invention discloses isolated histatin polymucleotides and polymeptides, which comprise sequences expressed in bovine. Histatins are histatine rich and specific to the salivary secretions. They are believed to function as part of the non-immune defence system, particularly in the cardidosis. Also disclosed are compositions comprising the histatin polymeptide or polymelectide, and at least one compositions with oral caption of pharmaceutical carriers or immunostimulants. The histatin polymelectide, polymeptide, for the comment consisting of histatin polymelectide, polymeptide or perfect or composition or in the polymeptide, is useful for treating (e.g. gene therapy) a disorder in a mammal, particularly microbial or fungal infections. The histatin polymelectide is also useful in genes Specifically, the polymeptide or polymelectide is useful for treating fungal or bacterial infections of the oral cavity (e.g. deneal caries, plaque or tartar), caused by Pseudomonas aeruginosa), mucosa or eye, as well as for treating caused by Pseudomonas aeruginosa), mucosa or eye, as well as for treating entering and manning or the cardidate in urethra, ear, skin, respiratory tract (e.g. cystic fibrosis or systemic infections such as systemic candidations. The polymeptide or polymeric contract or eye, as well as for treating experiment infections such as systemic candidations. The polymeptide or polymeric candidations. The polymeric plants of the cardidations or eye, as well as for treating experiment infections such as systemic candidations. The polymeric plants or the cardinations of the cardidations or eye, as well as for treating experiment infections such as systemic cardidations. The polymeric plants are polymericant or plants are proposed and plants are plants are plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New histatin polynucleotides and polypeptides expressed in bovine tissues, useful for treating bacterial or fungal infections in mammals, e.g. infections of the oral cavity, vagina, urethra, ear or skin, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          polynucleotide is also useful for veterinary applications e.g. for atting mastitis. The sequence presented is a cDNA encoding a bovine statin like polypeptide

the invention unsergoes sequences expressed in border. Histatins are instituted, which comprise sequences expressed in border. Histatins are histidine rich and specific to the salivary secretions. They are believed to function as part of the non-immune defence system, particularly in the cord cardity and have promise as therapeutic agents in humans with oral cardity and have promise as therapeutic agents in humans with oral candidosis. Also disclosed are compositions comprising the histatin of polypeptide or polymenticedide, and at least one component consisting of physicological or pharmaceutical carriers or immunostimulants. The histatin polymucleotide, polypeptide, or the cosmetic composition of discret in a mammal, particularly microbial or fungal infections. The histatin polymucleotide is also useful for treating (e.g. gene therapy) a cincatin polymucleotide is also useful for treating fungal or bacterial colling of genes. Specifically, the comprision of the oral cavity (e.g. dental caries, plaque or tartar), cappactions of the oral cavity (e.g. dental caries, plaque or tartar), cappactions such as systemic Candida infections are polypeptide or polymucleotide is useful for treating as well as for treating systemic infections such as systemic Candida infection. The polypeptide or polymucleotide is also useful for veterinary applications e.g. for treating mastitis. The sequence presented is a cDNA encoding a bovine content in the polypeptide or polymorphyse presented is a cDNA encoding a bovine content of the content of th

Histatins are histafine rich and specific to the salivary secretions. They are believed to finction as part of the non-immune defence system, particularly in the coral cavity and have promise as therapeutic agents in humans with oral cavity and have promise as therapeutic agents in humans with oral cardidosis. Also disclosed are compositions comprising the histatin polypeptide, and at least one component consisting of physiological or pharmaceutical carriers or immunostimulants. The comprising the polypeptide, is useful for treating (e.g. gene therapy) a discretin polypeptide, is useful for treating (e.g. gene therapy) a discretin polypeptide is useful for treating fungal infections. The histatin polypeptide is also useful for treating fungal or bacterial infections of the oral cavity (e.g. dental caries, plaque or tartarl, infections of the oral cavity (e.g. dental caries, plaque or tartarl, subjections are systemic cansed by Pseudomonas aeruginosi, mucosa or eye, as well as for treating systemic infections such as systemic Candida infection. The polypeptide or polyputide is also useful for veterinary applications e.g. for treating mastitis. The sequence presented is a cDNA encoding a bovine the histatin like polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New histatin polynucleotides and polypeptides expressed in bovine tissues, useful for treating bacterial or fungal infections in mammals, e.g. infections of the oral cavity, vagina, urethra, ear or skin, or systemic infections.

The invention discloses isolated histatin polynuclectides and polypeptides, which comprise sequences expressed in bovine. Histatins are polypeptides, which comprise sequences expressed in bovine. Histatins are histatine rich and specific to the salivary secretions. They are believed to function as part of the non-immune defence system, particularly in the candidosis. Also disclosed are compositions comprising the histatin of polypeptide or polynuclectide, and at least one component consisting of physiological or pharmaceutical carriers or immunosimulants. The comprising the polypeptide, particularly microbial or fungal infections. The discret in a mammal, particularly microbial or fungal infections. The comprising the polypeptide, is useful for treating (e.g. gene therapy) a discret in a mammal, particularly microbial or fungal infections. The polypeptide is also useful in genome mapping, physical mapping or in the positional cloning of genes. Specifically, the confidence or polymuclectide is also useful for treating fungal or bacterial infections of the oral cavity (e.g. dental caries, plaque or tartar), vagina, urethra, ear, skin, respiratory tract (e.g. cystic fibrosis caused by Resudomonas aeruginosa), mucosa or eye, as well as for treating systemic infections such as systemic Candida infection. The polypeptide or prolymuclectide is also useful for veterinary applications e.g. for creating mastitis. The sequence presented is the bovine mammary tissue or companies.
                                                                            New histatin polynucleotides and polypeptides expressed in bovine tissues, useful for treating bacterial or fungal infections in mammals, e.g. infections of the oral cavity, vagina, urethra, ear or skin, or
                                                                                                                                                                                                                         Example 2; Page 15; 17pp; English

polypeptides, which comprise sequences expressed in bowine. Histatins are histidine rich and specific to the salivary secretions. They are believed to function as part of the non-immune defence system, particularly in the coral cavity and have promise as therapeutic agents in humans with oral cavity and have promise as therapeutic agents in humans with oral cavity and have promise as therapeutic agents in humans with oral candidosis. Also disclosed are compositions comprising the histatin of polypeptide or polymentoeride, and at least one component consisting of physiological or plarmaceutical carriers or immunostimulants. The comprising the polypeptide, particularly microbial or fungal infections. The histatin polymucleotide is useful for treating (e.g. gene therapy) a discorder in a mammal, particularly microbial or fungal infections. The histatin polymucleotide is also useful for treating fungal or bacterial corplypeptide or polymucleotide is useful for treating fungal or bacterial corplinations of genes. Specifically, the confinence or polymucleotide is useful for treating fungal or bacterial caused by Resudomonas acruginosa), mucosa or eye, as well as for treating systemic infections such as systemic Candida infection. The polympetide or prolymucleotide is also useful for veterinary applications e.g. for treating mastitis. The sequence presented is a cDNA encoding a bovine construction like polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         197

The invention discloses isolated histatin polynucleotides and colypeptides, which comprise sequences expressed in bovine. Histatins are polypeptides, which comprise sequences expressed in bovine. Histatins are histation as part of the non-immune defence system, particularly in the coral cavity and have promise as therapeutic agents in humans with oral cavity and have promise as therapeutic agents in humans with oral cardidosis. Also disclosed are compositions comprising the histatin oplymorpectice, and at least one component consisting of physiological or pharmaceutical carriers or immunostimulants. The comprising the polypeptide, is useful for treating (e.g. gene therapy) a discrder in a mammal, particularly microbial or fungal infections. The nistatin polymucleotide is also useful in genome mapping, physical caused the oral cavity (e.g. dental caries, plaque or tartar), the polypeptide or polymucleotide is useful for treating fungal or bacterial infections of the oral cavity (e.g. dental caries, plaque or tartar), vagina, urethra, ear, skin, respiratory tract (e.g. cystic fibrosis caused by Pseudomonas aeruginosa), mucosa or eye, as well as for treating systemic infections such as systemic Candida infections. The sequence presented is a convertion a bovine treating mastitis. The sequence presented is a convertion as bovine pretatin like polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New histatin polynucleotides and polypeptides expressed in bovine tissues, useful for treating bacterial or fungal infections in mammals, e.g. infections of the oral cavity, vagina, urethra, ear or skin, or systemic infections.

The polynucleotide, which is a secreted EST, and the encoded protein are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliocating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, hematopolesis regulating activity, issue growth activity, activin/inhibin activity, chemotactic/chemokinetic activity, haemacotatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, tumour inhibition activity. The polynucleotide may also be useful for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to novel human GENSET coding sequences ACC51060-ACC51115) and proteins (ABR46453-ABR48508). The GENSET sequences are useful for preparing a composition for treating GENSET related disorders. They can also be used as markers for tissues in which the corresponding protein is preferentially expressed, as molecular weight markers on Southern gels, as chiromosome markers or tags to identify chromosomes, and as reagents in assays to quantitatively

The present invention relates to novel GENSET polynucleotides (ABZ36404-ABZ36911) encoding polypeptides (ABP75963-ABP76368). The polynucleotides and polypeptides are useful in screening and diagnostic assays for abnormal GENSET expression and/or biological activity. They are also useful for screening of compounds for treating or preventing GENSET-related disorders, such as heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, central nervous system (CNS), cardiovascular or gastrointestinal effects of the toxicity. The polynucleotides are useful for constructing or expanding chromosome maps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              179
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                50 gacrerecretricagrada a gacrete a general de la contra del la contra della contra

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to novel GENSET polynucleotides (ABZ36404-ABZ36911) encoding polypeptides (ABP75963-ABP76368). The polynucleotides and polypeptides are useful in screening and diagnostic assays for abnormal GENSET expression and/or biological activity. They are also useful for screening of compounds for treating or preventing GENSET-related disorders, such as heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, central nervous system (CNS), cardiovascular or gastrointestinal effects of the toxicity. The polynucleotides are useful for constructing or expanding chromosome maps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180 TATGGCTCTCATCCTAGCCATGATTAGAGCTGATTCATCTGAAGAGAAACGTCACAGGAA 239

These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forenatics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180 TAIGGCICTCAICCIAGCCAIGALTAGAGCTGAITCAICTGAAGAGAAACGICACAGGAA 239

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to human lysine-rich statherin protein (LRSP) (AAY94526). The cDNA sequence encoding this protein was identified through analysis of a cDNA library of breast tumour tissue (BRSTNOT14). The LRSP sequence was found to have homology with the DNA of human estatherin (the present sequence) and human basic histidine-rich protein (AAY94528). Human statherin is a phosphoprotein that acts as an inhibitor of precipitation of calcium phosphate salts in the oral cavity. The LRSP polypeptide and its antagonists may be useful for treating or preventing disorders associated with the activity of LRSP. Such disorders include dutoimmune/inflammatory disorders (for example AIDS, allergies, asthma, diabetes mellitus), bacterial and fungal infection and cancers (such as leukemia, adenocarcinoma, melanoma). Antibodies to LRSP may be useful for diagnosis of the above disorders

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                   The invention relates to a novel NOVX polypeptide. The polypeptide-of the invention demonstrates cardiant, antiarteriosclerotic, hypotensive, cytoscatic, ancrectic, antidiabetic, immunosuppressive, anti-HIV, neuroprotective, nootropic, antidiabetic, immunosuppressive, anti-HIV, neuroprotective, nootropic, antiparkinsonian, antidasthmatic and gynaecological activities and may be useful in diagnosing, treating or preventing NOVX-associated disorders including cardiomyopathy, preventing NOVX-associated disorders including cardiomyopathy, atherosciarosis, hypertension, cancer, obesity, diabetes, AIDS, multiple sclerosis, graft-versus-host disease, Alzheimer's disease, ABRA mantiple be utilised as vaccines whilst the nucleic acids may be used as hybridisation probes, in gene therapy, chromosome mapping, tissue typing, preventive medicine and pharmacogenomics. The current sequence is that of the human NOV CDNA of the invention.
                                                                                                                                                                                                                                                                                                                                              315

The invention discloses a polynucleotide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel conditions and also claimed is a polypeptide encoded by the polynucleotide. Or lits partial peptide, an antibody binding to the polypeptide or peptide or the polynucleotide, immunologically assaying the polypeptide or peptide of the polynucleotide, immunologically assaying the polypeptide or peptide or the polynucleotide by contacting the polypeptide or peptide or the antibody of the encoded protein and observing the binding between the two, a transformant carrying the polynucleotide in an expressible manner and an antisense polynucleotide. The oligonucleotide of a useful as a primer for synthesising the polynucleotide, or as a probe contact of a useful as pharmaceutical agents and many disease-related proteins are useful as pharmaceutical agents and many disease-related confidence for regulation of their expression and activity, or as targets of gene therapy. The genes are involved in tissue and/or cell capencial transcription-related proteins, signal transduction-related proteins, concoding them can be used as indicators for diseases (e.g. osteoporosis, neurological diseases, cancer, tumours: The colba may be used to regulate the activity or expression of the invention. Note: Some of the sequence contact of the activity or expression of the invention. Note: Some of the sequence of the activity or expression of the invention. Note: Some of the sequence of the
